

DIGITAL LITERACY

Name : Dibya Pallak Sandha

Reg No. : 25BOE10129

Branch : Computer Science Engineering, Core

Year : First Year

Course Code : CSE0001

Course Title : Digital Literacy

Date : 31 March 2026

INTRODUCTION

This project was assigned as part of the Digital Literacy course to help students understand the importance of navigating the digital world responsibly and effectively. As a Student Digital Ambassador, the objective was to create a digital literacy portfolio that demonstrates awareness of online tools, platforms, communication methods, and cyber safety practices.

The project involved completing five tasks, including creating an infographic, building a digital portfolio, exploring coding and collaboration tools, practicing professional email etiquette, and studying cybercrime awareness. Through these activities, I gained practical knowledge of various digital platforms and developed essential skills required for academic and professional growth in the modern digital environment.

TASK 1 : INFOGRAPHIC

For this task, I created a digital literacy awareness infographic using Canva. The infographic highlights key concepts such as the meaning of digital literacy, useful digital tools for students, safe internet practices, and the importance of maintaining a professional online presence.

I selected a clean and simple design template to ensure that the information is easy to read and visually appealing. The use of icons and short bullet points helped in presenting the content clearly and effectively.

One challenge I faced was selecting the most relevant information while keeping the design uncluttered. However, this task helped me understand how to communicate important ideas visually in a concise manner. It also improved my design and presentation skills.

TASK 2 : DIGITAL PORTFOLIO

In this task, I created profiles on GitHub and LinkedIn to establish my digital presence. GitHub is a platform used for hosting and sharing coding projects, while LinkedIn is a professional networking platform that helps connect with peers, mentors, and potential employers.

On GitHub, I created a profile README that includes my basic academic details and interests. On LinkedIn, I added my educational information, including my degree, institution, and expected graduation year.

I plan to use GitHub to upload my projects and track my learning progress in programming. LinkedIn will help me build a professional network, explore internship opportunities, and stay updated with industry trends over the next four years.

This task helped me understand the importance of building and maintaining a professional online identity from an early stage.

TASK 3 : PLATFORMS

For this task, I explored both coding practice and collaboration platforms. I used HackerRank to complete a beginner-level coding challenge, which helped me understand basic programming logic and problem-solving techniques.

In addition, I created a Google Form titled “Digital Literacy Quiz” to test awareness among students. The form included five questions covering topics such as digital literacy, phishing, password security, and safe internet usage. I also viewed the response section to understand how data is collected and analyzed.

These platforms are highly useful for academic growth. HackerRank will help me improve my coding skills through practice, while Google Forms can be used for surveys, quizzes, and data collection in academic projects.

Overall, this task helped me become familiar with tools that support both learning and collaboration in a digital environment.

TASK 4 : EMAIL ETIQUETTE

In this task, I practiced writing professional emails and created a social media etiquette checklist. Poor digital communication can lead to misunderstandings and may create a negative impression.

For example, sending an email without a proper subject line, greeting, or structure may appear unprofessional and could be ignored by the recipient. By following proper email etiquette, such as using a clear subject, respectful tone, and proper formatting, communication becomes more effective.

This task helped me understand the importance of professionalism in digital communication and how small details can make a big difference in conveying messages clearly.

TASK 5 : CYBERCRIME AWARENESS

While researching cybercrime, I was surprised by how common UPI fraud has become, especially with the increasing use of digital payments in India. Many people fall victim due to lack of awareness and trust in unknown sources.

I learned that scammers often trick users into approving payment requests or sharing sensitive information such as OTPs and PINs. These small mistakes can lead to serious financial loss.

As a result, I will be more cautious while making online transactions and will always verify requests before taking action. This task helped me understand the importance of staying alert and informed to ensure safety in the digital world.

CONCLUSION :

This project provided valuable insights into digital literacy and its importance in today's world. Through various tasks, I learned about digital tools, professional communication, online collaboration, and cyber safety practices.

The project helped me develop practical skills that will be useful in both academic and professional environments. It also emphasized the importance of maintaining a responsible and secure online presence.

Overall, this assignment was a great learning experience that improved my understanding of the digital world and how to navigate it effectively.
